Mosaïque Equity EUR

Monthly factsheet

December 2022

Portfolio manager's commentary

Portfolio ends an eventful year on a weak note

Risk appetite abated and markets fell in December despite a better-than-expected US inflation print and easing inflation across Europe. Monetary policymakers continued to raise their respective interest rates and reiterated their hawkish policy stance.

Over the month the portfolio continued to benefit from the resurgence in Emerging Markets Asia, but detracted as exposure to high-quality names suffered, such as Apple and Alphabet. Yet, we maintain that investment in high quality businesses can navigate difficult waters and have the potential to take further market share.

Furthermore, 2022 has been a very difficult year, where there were few hiding places. The major asset classes - stocks and bonds – were down by double digits, while gold delivered some comfort. Equity asset allocation effect was mixed for the year, but equity selection (stock picking) was positive. However, the equity-style exposure of the portfolio was a drag. We prefer quality and growth styles over value and whilst exposure to 'quality' was slightly positive this year, exposure to 'growth' and under-exposure to 'value' were negative attribution factors. It remains to be seen whether the more cyclical and 'value' orientated names can continue to outpace those 'growth' names in 2023.

In portfolio activity, with the macro and geopolitical picture remaining uncertain, we decided to hedge the equivalent of 10% of our equity exposure by adding a put warrant on the MSCI World index.

Among Equities, we reduced our cyclical exposure to US banks, namely Morgan Stanley and Bank of America, in the light of a slowing economy and recession fears.

Remarks

- The ESG track record and the MSCI ESG Rating measure how well a company performs on environmental, social and governance issues compared to other companies (peers) in the same industry. The importance of the 3 different factors varies by industry. Companies with a below average ESG track record / MSCI ESG Rating are considered riskier since they are more likely to be impacted by factors such as controversies, new social and environmental regulations, bad reputation, litigation risk, poorly motivated work force and financial mis-management.
- The Carbon Exposure Risk measures the probability and severity that a company is negatively impacted by climate change. Climate change exposure can be physical, for example through extreme heat or flooding, policy related, for example through the introduction of a carbon tax, or technological, for example through competitors developing greener products. The risk is a function of the company's exposure to climate change and of how well the company is managing that exposure.
- The CO₂e Sales Intensity measures how much CO₂ equivalents are emitted by a company per USD 1 million sales in the most recent reporting year as reported by MSCI ESG Research. The emissions are direct emissions generated by sources owned or controlled by the company and those from the generation of purchased energy.
- The ESG distributions in the charts exclude money market and derivative positions such as foreign currency forwards.

Important information

All performance data refers to share class XI ACC.

Source: Rothschild & Co and Bloomberg

Sharpe ratio: Sharpe Ratio is the statistical measure of excess portfolio return over the risk-free rate relative to its standard deviation.

Annualized Volatility: Annualized Volatility is the measure of return dispersion for an asset over twelve month since inception.

Maximum Loss: This is the largest monthly drop in the portfolio's value during a given period. It is expressed as a percentage and reflects the fall in value during the time between the draw down peak (highest value) and the drawdown valley (lowest value).
