Values: All data as at 30th June 2023. Sources of charts and tables: Rothschild & Co and Bloomberg, unless otherwise stated. Past performance is not indicative of future performance and investments and the income from them can fall as well as rise. Fund performance is shown in Euros, after all fees, in total return, combining income and capital growth. Returns may increase or decrease as a result of currency fluctuations.

Please ensure you read the Important Information section at the end of this document.

Fund manager's review

Central banks increased interest rates further during the second quarter as they continue to tame stubbornly high inflation. Following strong but volatile performance at the start of the year, global equities continued to rally over the second quarter.

PORTFOLIO PERFORMANCE

The first half of 2023 demonstrated an inverse in market sentiment, meaning that last year's 'worst' Equity investment style, growth, was this year's best thus far. Undoubtedly, this shift has helped the portfolio. Furthermore, during the second quarter of 2023, the portfolio continued to benefit from our preference for companies that demonstrate high quality characteristics, particularly large and mega cap exposure. The quarter began calmly as overall stress and default measures remained subdued. Despite an economically fragile May, comprising major central banks' interest rate hikes and divergent manufacturing and service data, the portfolio returned positively. Finally, a resounding June rounded out a good quarter and first half of the year.

Whilst equities have performed well, the 'magnificent seven' largest US technology-related stocks have accounted for most of the market gains this calendar year so far. This rally's limited appeal raised concerns about its viability in the near-term, but we have already observed broader stock market participation in June, which we deemed a healthier market environment.

Over the quarter, we kept a neutral Equity positioning and stock selection was the main performance driver. The prospects presented by Artificial Intelligence functioned as a catalyst for the rally in the technology sector as well as quality mega-cap stocks and our exposure to both turned out exceptionally well. Also, financial names reacted well following the announcements of several weaker banks being acquired by competitors with solid balance sheets. Thus, the idea that a full-blown banking crisis was unlikely, became widely accepted. On the other end of our stock selection, our healthcare and Asian (ex-Japan) exposed names lagged.

Among single stocks, Amazon (+26%), Adobe (+27%), Microsoft (+18%), Apple (+18%) and Alphabet (+15%) were amongst the top portfolio performers this quarter and all except Adobe were part of the abovementioned 'magnificent seven' stock rally this year. In addition, JPMorgan Chase gained more than 5% relative to its peers following its rescue of First Republic Bank.

The detractors contained Sonova and Alibaba, all declining by double digits. The latter reported strong financial results, and the choice to streamline its business portfolio was unquestionably advantageous, yet sentiment still proved to be too much of a risk in the region. Sonova found itself on the opposite end of the spectrum in comparison to Q1 and throughout the wider medtech industry, the normalisation process following Covid-19 has been a headwind.

In Fixed Income, 1H23 bond returns were positive across developed markets, apart from the UK, albeit with positive performance concentrated in 1Q23. Bond returns have been overall slightly positive in 2Q23 while the portfolio was impacted by the shorter duration positioning. Fear of banking sector stress spilling over did not materialise within European capital markets, with firms maintaining market access. Thus, we kept our overweight towards credit while seeking higher quality and shorter duration issues. The case for 2H23 is for a medium-term bullish duration outlook while being cautious in the shorter term as further clarity about terminal rate level is needed. Markets forecast positive bond returns across developed markets for the second half of the year.

Fund manager's review (continued)

PORTFOLIO ACTIVITY

Starting in April, we took the opportunity to increase exposure to the LongRun Equity fund, as we observed central banks curtail their continuous rate hiking phase.

In May, we purchased two structured products. First, we replaced our equity hedging product, which expired in June. This trade reinforced an element of protection against macro and geopolitical uncertainty. Then, we introduced a structured product on China as we continued to view it as an attractive market. Moreover, the country has shown signs of stabilisation in the property market, a departure from the zero-Covid policy and valuations with growth potential. Rather than investing directly in volatile mega-cap Hong Kong listed names, we sought to balance the opportunity with the risk by building a capital protected structured product with an underlying, consisting of both the CSI 300 and CSI 500 indices. This was financed by a reduction of the Veritas Asian Fund.

Additionally, we invested capital in Fixed Income to strengthen the allocation while preserving the portfolio's duration and improving portfolio quality.

Finally in June, we introduced RELX to the portfolio financed by a reduction in the Energy ETF. The addition reflected the asset allocation decision to be overweight Industrials. RELX is one of the world's largest providers of information-based analytics and decision tools. The company focuses on organic development and improvement of value-adding solutions, broader data sets and more sophisticated analytics. RELX's revenue visibility is high due to subscription-based multi-year contracts, and benefits from high margin and low capital intensity. Given its competitive edge and projected growth, we were drawn to the company trading at a reasonable price and decided to add it to the portfolio.

Fund performance

At the end of the second quarter 2023, the performance stood at 1.4% QTD and 4.1% YTD.

PERFORMANCE SINCE INCEPTION (%)*

Notes

At Rothschild & Co Wealth Management we offer an objective long-term perspective on investing, structuring and safeguarding assets, to preserve and grow our clients' wealth.

We provide a comprehensive range of services to some of the world's wealthiest and most successful families, entrepreneurs, foundations and charities.

In an environment where short-term thinking often dominates, our long-term perspective sets us apart. We believe preservation first is the right approach to managing wealth.

Important information

All performance data refers to share class Acc X.

Source: Rothschild & Co and Bloomberg

Sharpe ratio: Sharpe Ratio is the statistical measure of excess portfolio return over the risk-free rate relative to its standard deviation.

Annualized Volatility: Annualized Volatility is the measure of return dispersion for an asset over twelve month since inception.

Maximum Loss: This is the largest monthly drop in the portfolio's value during a given period. It is expressed as a percentage and reflects the fall in value during the time between the draw down peak (highest value) and the draw down valley (lowest value).

This document is issued by the Rothschild & Co WM SICAV SIF, a société anonyme incorporated under the laws of Luxembourg, on a strictly confidential basis to a limited number of potential investors, being "well informed investors" pursuant to the Luxembourg Law of February 13, 2007 relating to specialized investment funds, as amended (the "SIF Law"), who have indicated their potential interest for

the Rothschild & Co WM SICAV SIF. This document does not constitute a personal recommendation or an offer or invitation to buy or sell securities or any other banking or investment product.
