Monthly factsheet

March 2023

Portfolio manager's commentary

Portfolio resumes positive trajectory

Economic activity remains robust as inflation gradually subsides. Despite stresses in the banking system following the collapse of Silicon Valley Bank (SVB) and the subsequent forced takeover of Credit Suisse by UBS, global equities rose by 3.1% in March (in USD terms) and global government bonds rallied 3.7% (USD, unhedged terms).

In March, there was a turnaround in the portfolio's performance to end the quarter positively, where our quality focussed investment style worked well. In stock selection, JPMorgan Chase, Microsoft, Alphabet and Adobe were amongst this month's top contributors.

In portfolio activity, we introduced Safran during the month, financed from cash. Safran is one of the world's largest aircraft equipment manufacturers and aftermarket service providers. The company has three main branches : Aerospace Propulsion, Aircraft Equipment (Defense & Aerosystems) and Aircraft Interiors. With the stock at a reasonable valuation and a strong order backlog, we saw an attractive entry point given its competitive advantage and future growth.

Remarks

- The ESG track record and the MSCI ESG Rating measure how well a company performs on environmental, social and governance issues compared to other companies (peers) in the same industry. The importance of the 3 different factors varies by industry. Companies with a below average ESG track record / MSCI ESG Rating are considered riskier since they are more likely to be impacted by factors such as controversies, new social and environmental regulations, bad reputation, litigation risk, poorly motivated work force and financial mis-management.
- The Carbon Exposure Risk measures the probability and severity that a company is negatively impacted by climate change. Climate change exposure can be physical, for example through extreme heat or flooding, policy related, for example through the introduction of a carbon tax, or technological, for example through competitors developing greener products. The risk is a function of the company's exposure to climate change and of how well the company is managing that exposure.
- The CO₂e Sales Intensity measures how much CO₂ equivalents are emitted by a company per USD 1 million sales in the most recent reporting year as reported by MSCI ESG Research. The emissions are direct emissions generated by sources owned or controlled by the company and those from the generation of purchased energy.
- The ESG distributions in the charts exclude money market and derivative positions such as foreign currency forwards.

Important information

All performance data refers to share class Acc X.

Source: Rothschild & Co and Bloomberg

Sharpe ratio: Sharpe Ratio is the statistical measure of excess portfolio return over the risk-free rate relative to its standard deviation.

Annualized Volatility: Annualized Volatility is the measure of return dispersion for an asset over twelve month since inception.

Maximum Loss: This is the largest monthly drop in the portfolio's value during a given period. It is expressed as a percentage and reflects the fall in value during the time between the draw down peak (highest value) and the drawdown valley (lowest value).
