Fund manager's review

What a difference a year makes. Despite concerns about a recession at the start of 2023, the global economy did not slow by as much as many feared, inflation faded faster than expected and central banks were able to pause hiking interest rates. Stock and bond markets rallied in the fourth quarter to end the year on a surprising high.

PORTFOLIO PERFORMANCE

A recovering broad-based market rally guaranteed the portfolio's positive performance this quarter, capping off a very good year. The portfolio briefly continued its weakness in October, as wider market frailty highlighted the 'Magnificent 7's' narrow leadership. Furthermore, our overweight for healthcare companies suffered in comparison to the overall market. Yet, November featured a significant market rebound as developed economies continued to deflate and demonstrate economic resilience. Decisively, the stock market rally saw almost every sector record robust performance, thus restoring the previous three months' sluggish efforts. Similarly in fixed income, government bond yields fell sharply from their October highs. Meanwhile, the increased market activity – both equity and fixed income – continued in December, spurred by the prospect of major central banks adopting softer monetary policy considerably sooner in 2024.

Within equities, the overweight allocation functioned well over the quarter. Referring to the 4Q22 letter, we said that we would maintain our philosophy towards good quality businesses that have pricing power and can improve their competitive position within their industries during times of economic stress. We feel we have been vindicated in this approach over 2023. Initially, our preference for companies that demonstrate high quality characteristics, particularly large capitalization, led the portfolio. While this flattened throughout the year, our stock picking took over, whereby idiosyncratic factors of our holdings drove portfolio performance in the second half of the year.

Among single stocks, companies in the technology sector were the leaders and ASML (+22.2%) was the largest performer.

The semiconductor monolith resumed its climb once again, after the brief corrective phase the wider semiconductor companies experienced in the third quarter. Amazon (+19.5%) also reported very well, with results in-line on the top and greatly ahead on the bottom line. Likewise, performing strongly was the diversified information services provider, S&P Global (+20.8%). The company reported solid Q3 earnings in November, with both revenues and margins outperforming expectations. Furthermore, revenue expanded with positive growth across five of the business' six segments.

Epiroc and Nestlé were among the detractors. Epiroc has been impacted by a combination of macroeconomic uncertainties, Chinese weakness, and a challenging financing environment. The stock had been moving sideways until the conclusion of last quarter, when it fell even further. Nestlé's market sentiment has been weakened by volume pressures and gross margin erosion, leading to underperformance. Nonetheless, Nestlé has a history of defensive performance during macroeconomic downturns. Furthermore, the consumer staples sector had derated this year, with financial performance expected to normalise through 2024.

In fixed income, the driver of performance was also two-fold. Spreads widened from the year's commencement until reaching their peak in March, when they were disrupted by the banking and real estate crises. Following this event, they compressed for the remainder of the year on the back of better than feared macro data. Looking at duration positioning, the portfolio benefitted from the previously noted phenomenal rally in Q4. We favour a more barbelled approach in our positioning, owning high-quality paper combined with an element of high yield.

Fund manager's review (continued)

PORTFOLIO ACTIVITY

Starting in October, we switched our Rothschild & Co Gold Fund position into the Swiss Physical Gold Plus Fund (SPG+), which generates additional performance using an options overlay, making full use of allocated capital. In fixed income, the remaining switch of the Vontobel Emerging Markets Debt Fund to the Vanguard Emerging Markets Bond Fund was done.

In November, after a market correction, we increased exposure to the MSCI ACWI ETF, matching the equity allocation overweight positioning. Then, we reinforced Novo Nordisk and ASML, two companies about which we are very convinced. Novo Nordisk had an outstanding year and has been one of the pharmaceutical industry's top performers. In fixed income, we exited the Schroeder's Global Convertible Bond Fund as we no longer require convertibles exposure.

Finally in December, we made some portfolio adjustments before the year-end conclusion. We sold the small Veralto position, split out from Danaher in October through corporate action, as we already had a healthy blend of Industrial companies in the portfolio. Later, we sold Morgan Stanley. Out of Morgan Stanley and JPMorgan, we preferred to keep conviction with the latter and monitor the former from the sidelines.

Fund performance

At the end of the fourth quarter 2023, the performance stood at 5.2% QTD and 9.8% YTD.

Notes

At Rothschild & Co Wealth Management we offer an objective long-term perspective on investing, structuring and safeguarding assets, to preserve and grow our clients' wealth.

We provide a comprehensive range of services to some of the world's wealthiest and most successful families, entrepreneurs, foundations and charities.

In an environment where short-term thinking often dominates, our long-term perspective sets us apart. We believe preservation first is the right approach to managing wealth.

Important information

All performance data refers to share class Acc X.

Source: Rothschild & Co and Bloomberg

Sharpe ratio: Sharpe Ratio is the statistical measure of excess portfolio return over the risk-free rate relative to its standard deviation.

Annualized Volatility: Annualized Volatility is the measure of return dispersion for an asset over twelve month since inception.

Maximum Loss: This is the largest monthly drop in the portfolio's value during a given period. It is expressed as a percentage and reflects the fall in value during the time between the draw down peak (highest value) and the draw down valley (lowest value).
